

AKU GUIDE

2026

Kia tum banna chahte ho
AKU Batch Of 2026 ke
100 bachon me se aik?

This *Guide* **is** *For You!*

ABOUT AUTHORS

Noor ul Maham

Noor ul maham at your service. I am a premed A-level student. I had a great experience with PreMed.PK - its one of its kinds in Pakistan. an absolute essential for **MDCAT** and **AKU** test prep!

Eshal Abbas

Hi! I'm Eshal, currently a first year student at AKU. I'm the head for Guides and Blogs. Besides writing, I enjoy crafting, crocheting, and going down research rabbit holes.

Disclaimer: PreMed.PK is not officially affiliated with AKU, PMDC, or any other regulatory body in any capacity.

AKU COURSE TESTIMONIALS

Laiba Abid

AKU Course 2023

Pre-AKU entrance, I took the PreMed.PK AKU crash course, boosting my exam success. Seniors' guidance was pivotal in Stage II performance, securing my AKU spot. Immensely grateful for invaluable support.

Abeeha Zafar

AKU Course 2024

I want to share my great journey with a PreMed crash course for private universities. I've a great experience, the teachers are so co-operative. They motivated us on every step and especially Sir Usaid for chemistry, he's one of my favourite teachers, his way of teaching is excellent. PreMed **notes** are so good that we don't need to study the whole books from every province. Their **MCQs** cover all the books material.

Hassan Atta

AKU Course 2024

My experience with PreMed.PK has been nothing but **productive**. The website itself is very easy to navigate, & the **QBank** ensures that all your concepts are rock solid. Apart from that, the team is amazing too, from the **excellent teachers** for the live classes to the PreMed team for any other issues you may face. The **WhatsApp groups** provide a forum for learning with your peers and clearing any extra doubts you may have about the teachers. In short, my **AKU prep** was immensely supported by PreMed.PK and I would recommend it to anyone & everyone planning to appear for the test!

Haniya Shahzad

AKU Course 2024

Best, **10/10**. It was my only practice resource for **AKU**. It is the best online course in Pakistan to be honest, it's up to **international standards** of education.

THE PREMED.PK VISION

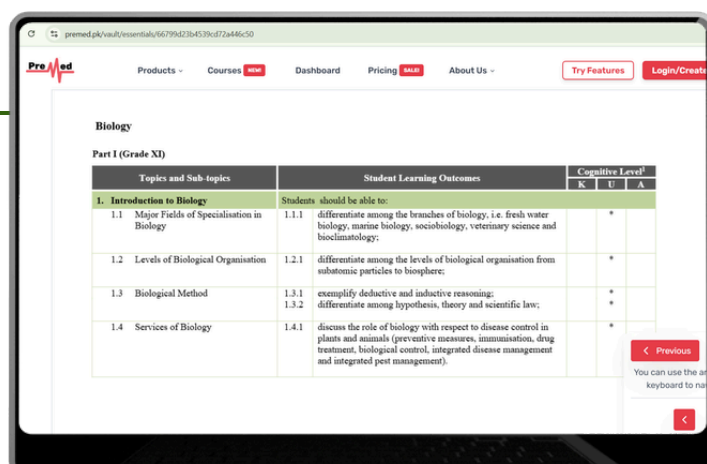

PreMed.PK is on a mission to provide the most **authentic** and up-to-date **MDCAT resources** to Pakistan's aspiring medical students. **MDCAT Toppers** have specifically designed this guide to make learning all the difficult content super easy and effective for our students. **Have fun learning with PreMed.PK!**

[Click here to get more preparation resources](#)

AKU TEST PATTERN

- The AKU Test is a total of **100 marks** with 100 questions.
- There are **100 MCQs** (Multiple Choice Questions) and each question has 4 options: **A, B, C & D**. You have to mark the best possible answer on your OMR/ Answer sheet provided.
- It comprises two sections: the science section is of **40 marks**, and the SR MR section is of **60 marks**. The first one is the **Science section** which includes questions from Biology, Chemistry, and Physics. The second one is the **Mathematics & Scientific Reasoning (SR) section**.
- Both sections need to be individually cleared, respectively, in order to be shortlisted for an interview. The threshold/passing score for each section varies every year and is not fixed.
- The total paper time is **2 hours**.

Click here for the **complete syllabus** for each of these subjects

[Biology](#)[Chemistry](#)[Physics](#)

SECTION A

In the Science section, **40 questions** cover Biology, Chemistry, and Physics.

There is no specific rule that each subject will have this many questions, so it usually varies, although Biology questions usually make up a higher percentage.

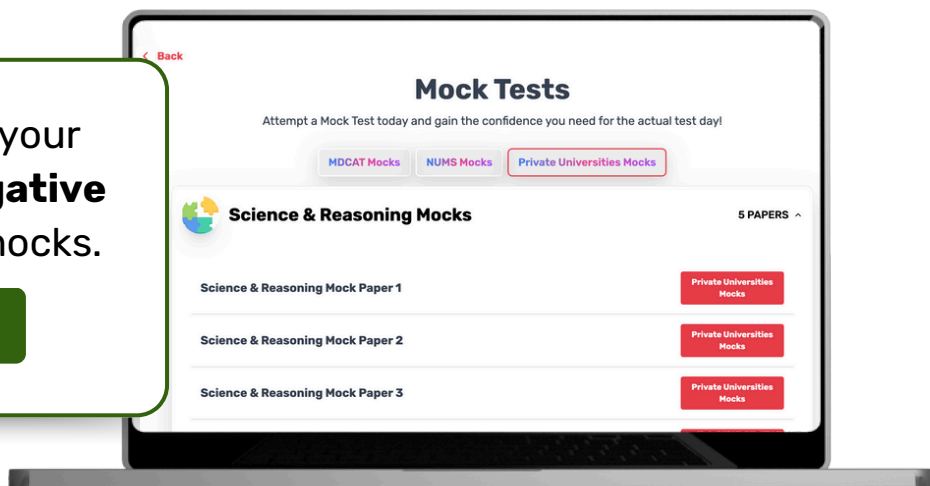

This section does contain **negative markings**. The criteria are as follows:

- For every correct answer, you are awarded 1 mark.
- For every question left, you score 0 on it.
- For every wrong answer, 0.25 marks are deducted.

Try to get as many right answers as possible but avoid guessing incorrectly. To do this, try to solve the easier questions first and then move on to others.

To practice and test your performance with **negative marketing**, use our mocks.

FREE Mocks

» SECTION B

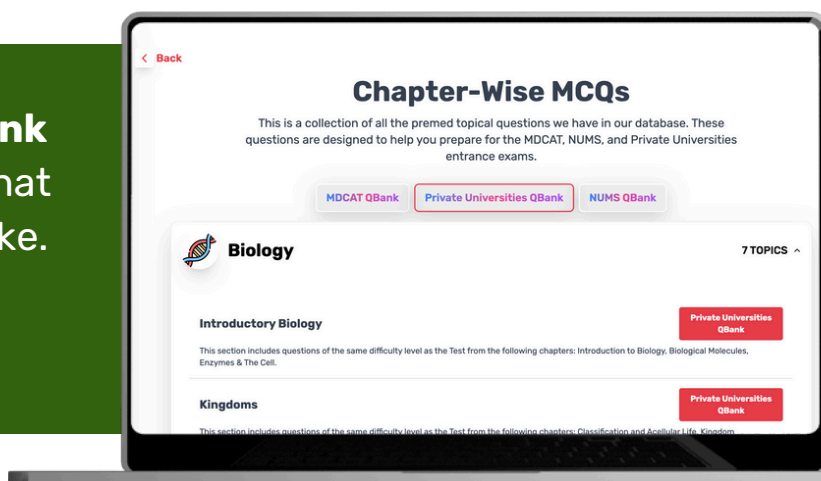

In the Math and SR section, there isn't a fixed number of questions for either topic, which varies yearly.

This section does not have negative markings. For every correct answer, you are awarded one mark. For every question left or answered incorrectly, no mark is deducted.

Since there isn't any negative marking, try every question to maximize your score!

Check our **Topical Question bank** for private universities to see what the Math and SR questions are like.

PreMed Topicals

AKU TEST RESOURCES

To prepare for the Mathematical Reasoning Section of the AKU Test, you will need to revisit your Matric Mathematics, as that is sufficient to prepare for the test. First, revise all of the important concepts in mathematics.

To revise concepts, you can visit PreMed for its courses for the preparation of the AKU test (Private Universities Courses).

If you need other sources you can also refer to these resources:

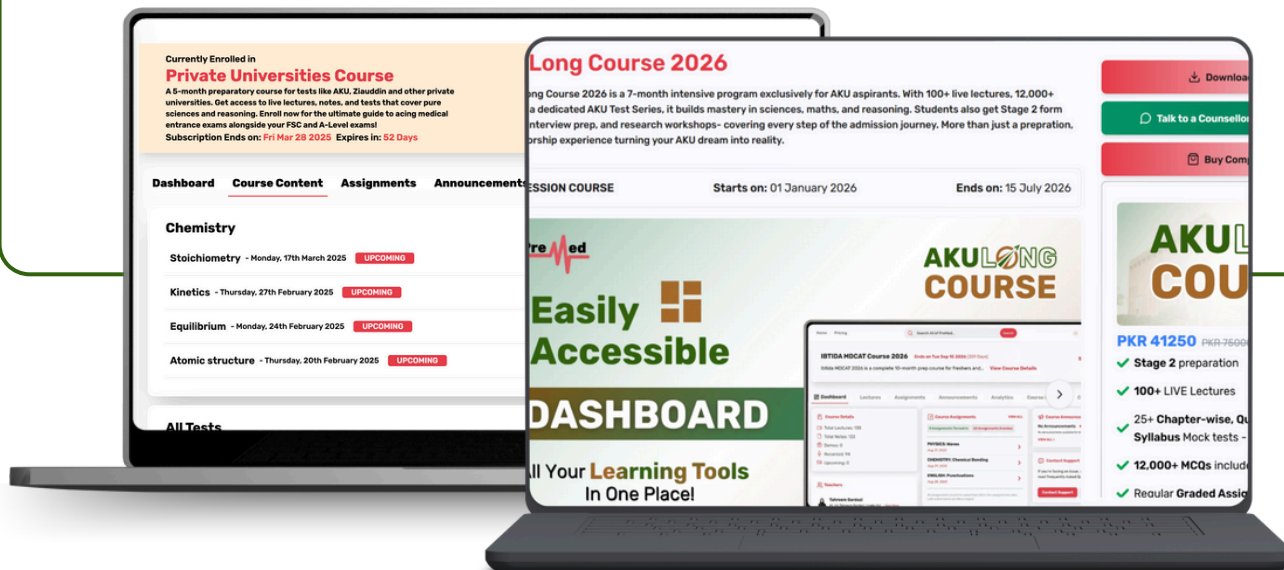

The Organic Chemistry Tutor

SAT Mathematics Lectures

High School Mathematics Courses - Khan Academy

Zainmatics

SAT Preparation - Khan Academy

Practice is very important for the Mathematical Reasoning Section. You can practice from several different resources, including **PreMed AKU Question Bank** (Private Universities Question Bank). You can also practice from Khan Academy and include practice from some questions of the IKMC Tests of Level Junior and Cadet, which will increase your general reasoning skills a lot.

[Click here to get more preparation resources](#)

Additionally, also refer to Barron's SAT Math Level 1 Book that covers many of the important concepts you need to know and has questions you can practice as well.

◆◆ What approach should I take to clear my concepts?

Study from the Punjab or the Federal textbooks and attempt questions on those topics by applying the concepts you learned. Remembering book lines or memorizing without understanding or learning its application is not sufficient nor recommended, as the test is not made from any particular book.

The majority of the test portion is concept-based, but there are some things that you will need to memorize that are factual.

For concept-based questions, practice them from the **Private Universities Question Bank** at **PreMed** which has many questions that mimic the style and pattern of the questions tested in the AKU Test. You can also refer to SAT Books (Barron's SAT) and International MCAT (Kaplan MCAT)

◆◆ Books for more concept-based questions:

For memory-based questions, you can go for the MDCAT Question Bank and its questions that have all the important memory-based questions and factual recall questions you can practice that will help you in the test.

◆◆ How to prepare Chemistry and Physics for the AKU Test?

Don't try to memorize everything. Instead, build concepts that will help you solve MCQs. Memorize only values such as electronegativity values of C or H halogens. Don't memorize boiling points and physical properties; if you understand the TRENDS, then these questions will also be easy for you

◆◆ If I prepare the entire MDCAT syllabus plus SAT math will I be able to clear the AKU test?

The AKU syllabus is much more extensive than the MDCAT syllabus, and the MDCAT does not cover every topic; therefore, it is advised to prepare for the complete AKU syllabus. On the other hand, preparing for AKU can help you cover all the syllabus for MCAT. As for math, SAT Math along with a good grip of common mathematical topics and practicing questions will help you in the math section.

◆ Does the AKU Test have more Questions from Federal Textbook, Punjab Textbook or A Level Textbook?

The AKU test is not from any specific textbook, and the test is made from many different sources and is not limited to board books or A-level books. That being said, to prepare well for the test, the most recommended resources are the Punjab Textbook and Federal Textbook, and this applies to students of all boards, including A Levels.

Nayab Zahra
AKU Course 2024

I liked PreMed.PK. It helped me a lot like the **cheatsheets** at the last day helped me to get **70.5%** in science which was an achievement.

Dewa Wajid
AKU Course 2024

The **reasoning** portion was really great. The **MCQs** helped me a lot, I couldn't find these anywhere else

Shamshad Hareem
AKU Course 2024

It's a good platform for exam preparation. My experience with PreMed is **good**. I would suggest PreMed for the preparation of the entrance test (MDCAT, NUMS, PRIVATE UNI, etc)

Omer Khalid
AKU Course 2024

I literally had 0 idea about the Maths portion and did all of it from the PreMed **Maths** and **Science Reasoning** course within the last week before the exam. The **recordings** were very concise and covered all the syllabi in very little time. Mam Aqsa's teaching skills are truly exceptional.

Aamerzish Khan
AKU Course 2024

It was helpful. The Question bank and free **daily topical test** are good features.

100k+ Students

ADMISSION FORM

Now that you have been shortlisted after taking the AKU test, you will be emailed the Stage-II form, which is to be printed.

Main sections of the form include:

- Personal Information
- Academic Section
- Gap Year Guide
- Extracurricular Section
- Reference Letters

◆ GENERAL GUIDELINES:

Submission: Ensure that you send your application by courier sufficiently before time (at least one day before the deadline) to avoid logistical problems. You can also physically hand the application to the admission office living in Karachi.

You have both options of either typing it or submitting a handwritten copy. Rightfully, typing looks neater, and you can add more text in a smaller area.

Add supporting evidence for every achievement you mention and add them in the same order as you listed them in the form. (certificates, letterheads, photos, etc.)

All supporting evidence needs to be attested by a **grade 17** or above government official.

◆ PERSONAL INFORMATION:

- Fill it according to your CNIC.
- Staple a recent passport-size photograph with your application number and name written behind it.
- Medical Colleges: Write, at most, the names of the top 3-4 medical colleges you may have applied to.
- For the current institution enrolled in, high school graduates should mention their high school name and write "(graduated)" alongside.
- In case the PMC registration number has not been received, mention "pending" and email the admissions office when details are received.

◆ EDUCATIONAL INSTITUTES:

Mention the complete school name (no acronyms) alongside the year of graduation. Educational institutes must be mentioned from MOST recent first to older ones mentioned later. Qualification refers to the examination board (O/A levels, FSc, HSSC). Grades should be mentioned as an aggregate score or compiled total (5A*s, 4As, 1B, etc.).

Note: Do not submit school transcripts as evidence IN THIS SECTION.

◆ ACADEMIC ACHIEVEMENTS:

Begin with your most recent achievement. Due to limits on academic achievements and category overlap (e.g., Science Olympiads fitting ECAs and Achievements), prioritize extraordinary and unique accomplishments.

These can include the following:

- Scholarships are awarded in schools or externally based on your academic performance.
- Distinctions awarded by your exam board.
- Mention if you have taken any SAT/ACT exams.
- Academic competitions, e.g., NSTC, Science Bowl, Kangaroo Maths, etc.
- Positions within the school/high school Prizes/honors awarded by the school or examination board(s)
- Merit scholarship-based abroad study programs you may have taken.

◆ GAP YEAR:

• Reason for a Gap Year

If you have previously appeared for the AKU Test, mention it here. You should clearly indicate whether you did not pass the test or if you were unable to progress past the interview stage. If you gave the MDCAT instead, share your good scores and if you joined another medical school previously. If you never took the AKU test, explain if you initially considered a different career path and later changed your plans.

• Achievements during Gap Year

List all your activities from the past year, then combine them to highlight maximum achievements in minimal words. Try combining the points into different

areas so you come off as a well-rounded figure.

- Firstly, mention academics like research, conferences, or online courses.
- Secondly, highlight community work, such as collecting donations or hospital visits.
- Thirdly, discuss a unique hobby, sports participation, or even helping family at home—anything works if well-written!

- **Any Other Comments**

Write anything that sets you apart; if not, express your passion for AKU and why you believe it's Pakistan's best medical school.

◆▶ **EXTRA-CURRICULAR SECTION:**

Structure your ECAs by listing all activities from the past 4 years on a piece of paper/word document etc. Use category triggers to recall and combine similar activities into concise points. Specify your participation level, role, and any notable achievements, elaborating on unfamiliar names. Write clear, grammatically correct sentences, and revise thoroughly using PDF tools. Prioritize activities that reflect genuine passion, meaningful experiences, and skills that shaped your identity—no effort is too small if it's genuine and heartfelt.

◆▶ **REFERENCE LETTER:**

Ensure reference letters are sealed and stamped by the signing authority for confidentiality.

- **Teacher's recommendation**

Choose a teacher from the past two years who knows you well, regardless of the subject (does not have to be science). Help them recall moments showing your strengths, but let them decide what to include. Focus on a teacher who has seen your best side and can describe you effectively.

- **For the Principal's recommendation**

Contact your school early, as the process may take time. Private students should reach out to AKU's admissions office for guidance. When requesting a reference letter from the principal, mention your qualities and interests if you've had little interaction.

THE PREMED.PK FEATURES

All In One Ecosystem

PreMed.PK is on a mission to provide the most authentic and up-to-date MDCAT resources to Pakistan's aspiring medical students. **MDCAT Toppers** have specifically designed this guide to make learning all the difficult content super easy and effective for our students. Have fun learning with PreMed.PK!

[Click here to get more preparation resources](#)

INTERVIEW

After the AKU entrance test, you'll find out whether you've passed or not within two to three weeks by email. If you clear the test, you'll receive another email about three weeks later with your interview date, time, and location.

◆◆ INTERVIEW LOCATIONS:

If you're in Karachi, your interview will be conducted at AKU itself. For candidates from Islamabad and Lahore, there are designated interview centers in these cities. Overseas students have the option of a phone interview, so location is not a barrier.

The interview typically lasts around 20 minutes, but this can vary—it might be shorter or longer depending on the flow of the conversation. The duration does not determine the outcome, so don't overanalyze how long (or short) your interview was.

◆◆ Who Conducts the Interview?

Your interview will be taken by senior faculty members, including doctors, professors, and administrators. These are experienced professionals who are not just evaluating your academic potential but also assessing your personality, communication skills, and motivation for medicine.

◆◆ INTERVIEW STRUCTURE:

You are free to speak in any language you're comfortable with. However, a general rule of thumb is to respond in the same language the interviewer is using. This isn't a strict requirement, and they won't judge you based on language preference, but it can help the conversation feel more natural.

While there's no fixed structure to the interview, some questions are commonly asked:

- **Introduction:** A brief, natural introduction about yourself.
- **Why AKU?** Be prepared to explain why you specifically want to study at this university.
- **Why do you want to become a doctor?** Your motivation for medicine should be clear and **personal**.

- **Why should AKU select you?** Explain what makes you a strong candidate.
- **Social Ethics & Responsibility:** Questions like, what is social responsibility? Or what's the difference between ethics and morals?
- **Scenario-Based Questions:** Hypothetical ethical dilemmas to see how you think and respond in different situations.

The interview is not a rapid-fire Q&A session—it's more of a conversation. Your answers will often lead to follow-up questions, so be prepared to expand on your responses. There's no single set of questions; some interviewers stick to a standard questionnaire, while others prefer open-ended discussions tailored to the candidate.

They aren't just looking for someone who's academically brilliant—they're assessing personality, critical thinking, and whether you'd be a good fit for AKU's culture.

◆ Tips for Preparation

- **Be Yourself, But Be Prepared**—You're essentially marketing yourself as a potential doctor. Don't undersell yourself, but also don't sound overly rehearsed or arrogant; the people sitting in front of you have achieved 10x more than any person you may know. Find a balance.
- **Know About AKU**—Understand its history, mission, and founder. Being informed shows genuine interest, and they might ask questions related to it.
- **Honesty is Key** – If you exaggerate or lie, they will likely catch on. Be truthful about your experiences.
- **Take Your Time**—If you need a moment to think, it's okay to ask for it. You don't have to answer instantly.
- **Extracurriculars Aren't Everything**— If you don't have many extracurricular activities, focus on other aspects of personal growth, such as responsibilities at home, hobbies, or any experiences that helped shape you.

Every interview is different, and no single approach guarantees success. What matters most is that you come across as genuine, thoughtful, and motivated person. Approach it as a conversation rather than an interrogation, and you'll have a much better experience.

FINANCIAL AID

- The details regarding the form for financial aid come with your acceptance letter, and new students must fill the form, which is present online, before the due date. No form is accepted after it.
- The amount awarded is based on the committee's evaluation of your financial needs.
- All verifying information and documents must be included.
- The documents required include your family information, including siblings (such as educational expenses), present assets and liabilities, income, expenses (including bills), and any other funding taken for your education.
- Financial assistance for new students is valid for one year only. You will need to submit a new application every year with relevant documents.
- Make sure all documents are precise and up-to-date.
- The repayment schedule is present on the fees and funding section of the AKU website. For MBBS, the grace period is defined as being 2 years after graduation and the repayment schedule is divided into the 5 years after that.

Note: Submission of the financial aid form does not guarantee aid.

Ending Note

We hope this guide has provided you with valuable insights and a clear roadmap for your AKU admission journey. The process may seem challenging, but with the right preparation, dedication, and mindset, success is within your reach.

Remember, admission to AKU is not just about academic excellence—it's about perseverance, curiosity, and a genuine passion for medicine. Stay consistent with your preparation, believe in yourself, and make the most of the resources available.

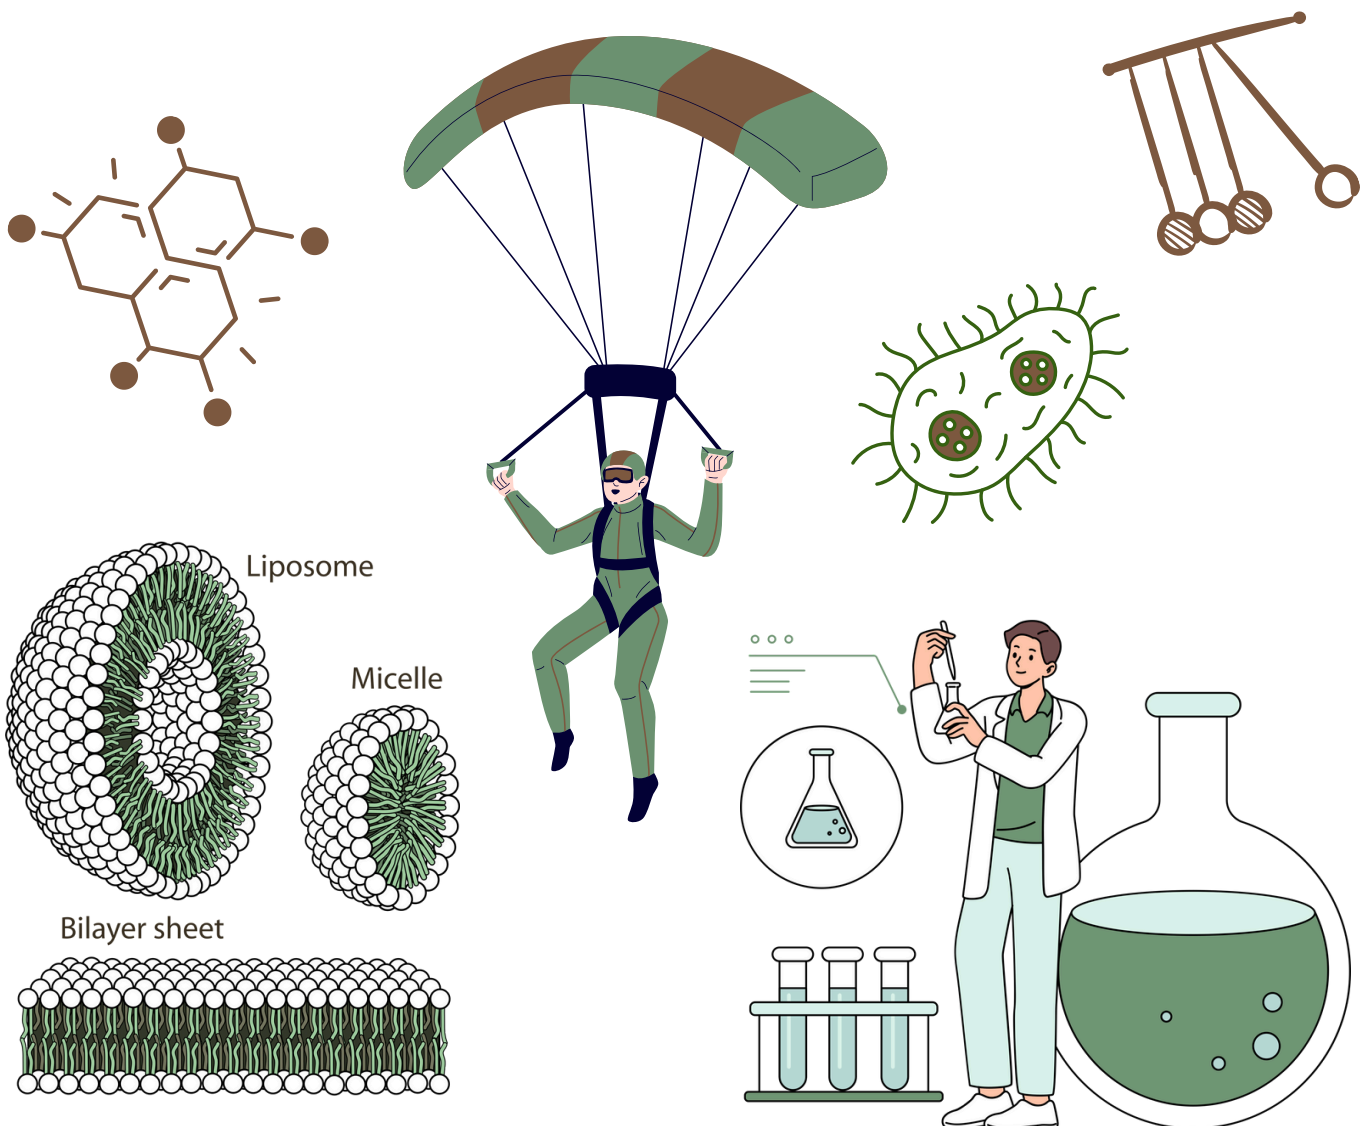

If you found this guide helpful, be sure to explore our **AKU Question Bank** and **Mock tests** to sharpen your skills further. Stay connected with us on [@premed.pk](https://www.premed.pk) for more tips, updates, and support! If you have any questions, contact us at contact@premed.pk

AKU Entrance Test

REASONING SECTION

The *Essentials* of *Reasoning* Simplified

STRUCTURE

- Contains around **60 MCQs**
- **Time:** ~60 minutes (varies year to year)
- No calculator allowed
- Sections typically include:
 1. Scientific Reasoning
 2. Quantitative Reasoning
 3. Verbal/Critical Reading

1. SCIENTIFIC REASONING

What It Tests

- Ability to interpret data in the form of:
 1. Graphs
 2. Tables
 3. Diagrams
- Skill in applying basic scientific knowledge logically rather than directly

Common Question Types

- Predicting outcomes
- Drawing inferences from experimental data
- Identifying experimental flaws or control variables

Tips

- Focus on understanding experimental design
- Don't memorize facts—apply logic
- Always read graphs and axes carefully
- Look for control vs. variable group differences

2. QUANTITATIVE REASONING

What It Tests

- Basic math and analytical skills using:
 1. Ratios & percentages
 2. Averages & medians
 3. Probability
 4. Word problems
 5. Graph/data interpretation

Common Question Types

- Converting data to equations
- Comparing ratios
- Interpreting trends from data
- Time-distance problems

Tips

- Practice mental math & estimation
- Focus on unit conversions and proportions

- Always check for hidden assumptions in word problems
- Eliminate implausible answers quickly

3. VERBAL REASONING / CRITICAL READING

What It Tests

- Ability to comprehend and analyze passages
- Logical conclusions
- Identifying assumptions, inferences, contradictions

Common Question Types

- "Which of the following best supports/weakens the argument?"
- "What can be inferred from this passage?"
- Tone and author intent

Tips

- Don't bring outside knowledge into the question
- Read with a skeptical and logical lens
- Focus on argument structure, not details
- Learn to spot distractors—they often contain half-truths

4. PRACTICE STRATEGY

Daily Practice Plan

- 🕒 30–45 min/day of reasoning questions
- Mix of:
 1. 2–3 scientific reasoning passages
 2. 2–3 quantitative problems
 3. 1–2 critical reading passages

5. RECOMMENDED RESOURCES

- Official AKU Past Papers (if available from peers/coaches)
- BMAT Section 1 practice (similar logic)
- **Books:**
 1. Critical Thinking Skills by Stella Cottrell
 2. Data Interpretation by Arun Sharma (for graphs and tables)

6. ONLINE RESOURCES

1. [Khan Academy Logical Reasoning](#)
2. [Cambridge Thinking Skills PDF \(OCR A-Level\)](#)
3. [PreMed's Reasoning Questions & Mocks](#)

7. PRACTICE STRATEGY

1. **Underline** key terms in questions (*e.g.*, "most likely," "except," "weaken")
2. **Pace yourself**—don't get stuck on one question
3. Use **elimination** aggressively—often 2 options are clearly wrong
4. **Graph & table questions:** always check axes and units
